Swedenergy's reply to the consultation on Energinet's proposed method of procuring energy for countertrade, reference 21/01999

Swedenergy, representing 400 companies, is the Swedish joint association for producers, distributors and suppliers of electricity, district heating and cooling.

Swedenergy welcomes the opportunity to reply to the consultation.

Swedenergy welcomes the proposal to use the intraday market to ensure capacity on the Danish (DK1) and German interconnector. In comparison with the current use of special regulation this will lead to an increased competition and a more efficient price formation hence an increase in socioeconomic efficiency to the benefit of society and climate.

Yours sincerely,

Henrik Wingfors
Head of Unit
Swedenergy
